Subject: Labadie, MO Ameren energy center

As a Labadie, MO resident who has to breathe the air around Ameren's Labadie coal burning plant and based on research done by Harvard University on the effects of SO₂, and based on the modeling done by MODNR and Sierra Club, I urge the EPA to issue a non-attainment designation to the area in question.

Since 3 years of testing is required to achieve to designation and Ameren has only done 3 months of testing, and that testing was done during a time period of typically lower seasonal emissions, and due to the fact that the monitors used by Ameren are not located in or near the areas of highest emissions (see Sierra Club modeling and meteorological data from Chesterfield Airport) it would be absolutely irresponsible to designate this area anything else.

Respectfully,

Petra Haynes
Labadie, MO
